CATTLE TICK INSPECTIONS

RECOMMENDED CATTLE TICK TREATMENT GUIDE

OPTION 1 – Plunge dipping or spraying methods

For plunge dips, it is extremely important that your dip is at the recommended strength of .025%.

1st treatment- Pour on or Injectable (Macrocylic Lactones) 42-50 days prior to the sale date.

2nd treatment,-plunge dipping or spraying 13-17 days prior to inspection date.

3rd treatment- plunge dipping or spraying 4-7 days prior to inspection date.

Cattle tick inspections will only be completed on the Wednesday and Thursday prior to the sale on the Friday.

OPTION 2 – Pour on or injectable treatment (Macrocylic Lactones)

1st treatment- 30-34 days prior to sale date.

2nd treatment- 6-9 days prior to inspection date.

Please ensure that treatment intervals are in compliance with the label for that particular chemical.

INSPECTION FEE SALE YARDS:

- Minimum Charge **\$27.50 inc GST** (1-25 head)
 - 25 head and upwards, **\$1.10 inc GST per head**
- (If cattle ticks are found above fees still apply)
